

SPL785-30-PM-PD

- Fiber-Coupled Laser Diode
- 785 nm, 30 mW
- 5 μm Polarization Maintaining Fiber
- Built-in Photodiode

Description

SPL785-30-PM-PD is a fiber-coupled laser diode, typically emitting at 785 nm with an output power of 30 mW. It comes in a coaxial package with a mounting bracket, with 5 μm polarization maintaining fiber, FC/APC connector and built-in PD.

Additional options like alternative housing are available on request.

Maximum Rating ($T_{\text{CASE}} = 25^{\circ}\text{C}$)

Parameter	Symbol	Values		Unit
		Min.	Max.	
Reverse Voltage	V_R		2.0	V
Operating Temperature	T_{OPR}	- 10	+ 60	$^{\circ}\text{C}$
Storage Temperature	T_{STG}	- 40	+ 85	$^{\circ}\text{C}$
Soldering Temperature (max. 3s)	T_{SOL}		+ 260	$^{\circ}\text{C}$

Electro-Optical Characteristics ($T_{\text{CASE}} = 25^{\circ}\text{C}$)

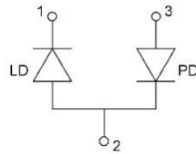

Parameter	Symbol	Values			Unit
		Min.	Typ.	Max.	
Peak Wavelength	λ_P	770	785	795	nm
Output Power	P_O		30		mW
Spectral Width (FWHM)	$\Delta\lambda$				nm
Threshold Current	I_{th}		30	50	mA
Operating Current	I_F		110	130	mA
Operating Voltage	V_F		2.0	2.5	V
PD Current	I_{PD}		0.3		mA
Fiber Specification	Type	Polarization Maintaining			
	Core	5			μm
	Connector	FC/APC			
	Length	80			cm
Polarization Extinction Ratio	PER	13	15		dB

Precautions

Safety

Caution: Laser light emitted from any laser diode may be harmful to the human eye. Avoid looking directly into the laser diode's aperture when the diode is in operation.

Note: The use of optical lenses with this laser diode will increase eye hazard

ESD Caution

Always do handle laser diodes with extreme care to **prevent electrostatic discharge**, the primary cause of unexpected diode failure. To prevent ESD related failures we strongly advise to always **wearing wrist straps**, and **grounding all applicable work surfaces**, when handling laser diodes

Operating Considerations

We strongly advise to only operate this laser diode with a current source. The current of a laser diode is an exponential function of the voltage across it. **Usage of current regulated drive circuits is mandatory.**

Laser diodes may be damaged by excessive drive currents or switching transients

It is advised, to operate the laser diode at the lowest temperature possible, and to never exceed maximum specifications as outlined in the datasheet. Device degradation will accelerate with increased temperature. **Proper heat sinking will greatly enhance stability and life-time of the laser diode.**
