**DUV-OC39**

- Deep Ultraviolet Light Emission Source
- 265, 280, 310, 325, 340 nm
- TO39 open submount
- Beam angle 144 deg.

### Description

**DUV-OC39** is a series of AlGaN based single emitter DEEP-UV LEDs in an open TO39 metal can package, with a beam angle of 144 degree. With the chip die directly accessible, and the output not attenuated by a lens, this package yields highest output power. **DUV-OC39** is available from 265 nm up to 340 nm peak wavelength with an optical output power of typically 1.5 mW up to 2.2 mW.

### Maximum Rating (T<sub>CASE</sub> = 25°C)

Precautions

Soldering:
- Do avoid overheating of the LED
- Do avoid electrostatic discharge (ESD)
- Do avoid mechanical stress, shock, and vibration
- Do only use non-corrosive flux.
- Do only solder the leads. Soldering of header or cap will damage the LED
- Do only cut the leads at room temperature with an ESD protected tool
- Do not solder closer than 3 mm from base of the header
- Do form leads prior to soldering
- Do not impose mechanical stress on the header when forming the leads
- Do not apply current to the LED until it has cooled down to room temperature after soldering

Static Electricity:
LEDs are sensitive to electrostatic discharge (ESD). Precautions against ESD must be taken when handling or operating these LEDs. Surge voltage or electrostatic discharge can result in complete failure of the device.

UV-Radiation:
During operation these LEDs do emit high intensity ultraviolet light, which is hazardous to skin and eyes, and may cause cancer. Do avoid exposure to the emitted UV light. Protective glasses are recommended. It is further advised to attach a warning label on products/systems that do utilize UV-LEDs:

![WARNING UV LEDs](image)

Class 1

Operation:
Do only operate LEDs with a current source.
Running these LEDs from a voltage source will result in complete failure of the device.
Current of a LED is an exponential function of the voltage across it. Usage of current regulated drive circuits is mandatory
