#### Caution in ESD

- 1. Static electricity and surge damages the LEDs. It is recommended to use a wrist band or antielectrostatic glove when handling the LEDs. All devices and equipment and machinery must be properly grounded.
- 2. When inspecting own final products on which LEDs were mounted, It is easy to find static-damaged LEDs by light emission test at lower current (below 1 mA is recommended).
- 3. Damaged LEDs will show some unusual characteristics such as leak current remarkably increases, starting forward voltage becomes lower, or the LEDs get unlighted at the low current.
